

THE CORE IDEA

A number is not a fact

81,415.38 means nothing alone. Attach what it measures, whose it is and when, and one rule can then decide how any two facts relate.

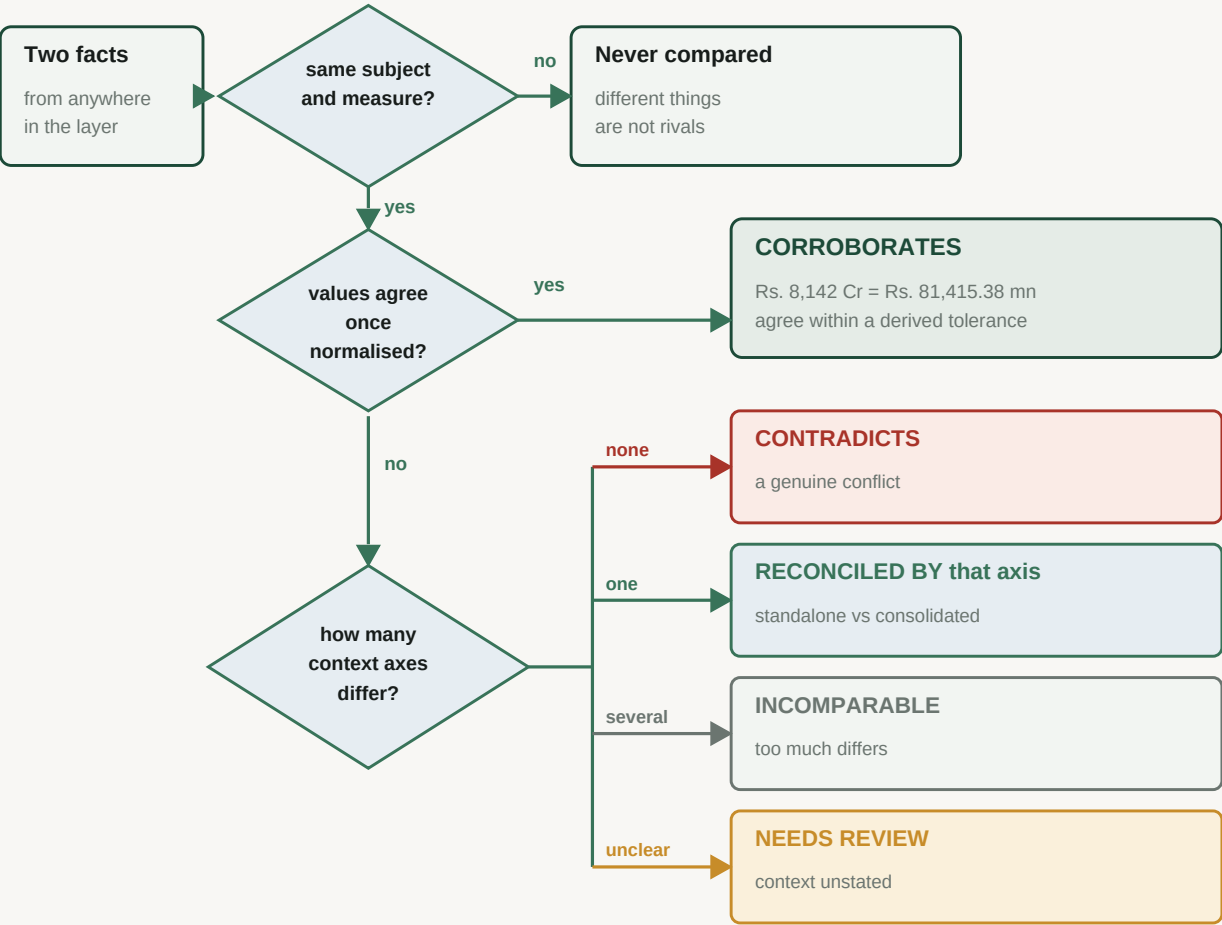

ONE FACT

subject	Delhivery Limited
who	
predicate	revenue from operations
what	
value	Rs. 81,415.38 mn -> 81.42bn INR
how much	
context	FY24 - consolidated - audited
the envelope	
evidence	page 21, quoted verbatim
the proof	

Drop the envelope and two true figures look like a lie.

Because a relationship stores the very diff that produced it, the explanation is generated from data rather than written by a model. That is what makes it checkable, and why one mechanism covers corroboration, contradiction and reconciliation instead of three detectors.

THE ONE RULE, AS A DECISION

A graph database stores the edges. The hard part is deciding which edges exist.
