The four cases, and the path each took

Produced offline with no API key. Page numbers are PDF page indexes, because both excerpts skip ranges of the original filing.

1 CORROBORATES

Annual report p21 Rs. 81,415.38 million
Earnings deck p13 8,142

Two documents, two units, one figure.
The deck's cell carried no unit at all - it
was inherited from the Rs. Cr header above
it. They agree within Rs. 50.05 lakh, a
tolerance derived from the precision each
side actually printed.

values agree -> CORROBORATES

2 NO CONTRADICTION FOUND

Three mechanisms searched 5,329 facts and
found zero cross-document contradictions.

Every candidate died to arithmetic. (452)
against (404) EBITDA looked like a conflict
until the deck turned out to print both
Reported and Adjusted, with the
reconciliation between them.
Reported as a null result, not invented.

no candidate survives review

3 RECONCILED BY SCOPE, AND BY TIME

One annual-report page, one sentence apart:
consolidated Rs. 81,415.38 mn
standalone Rs. 74,540.82 mn
A Rs. 6.87bn gap, entirely explained.

And a director serving in 2021 who ceased
in 2023 - joined across two documents by
DIN, explained by the as-of date.

one axis differs -> RECONCILED

4 A FAILURE, AND ITS FIX

Board tables list four directors per passage.
Every DIN bound to the nearest name, so one
person collected several and 11 of 13
directors became unresolvable - which broke
the join key the whole layer depends on.

Now bound inside record boundaries. Two
remain unknown, and are left that way.

doubtful input -> no verdict

Three of four are green. The fourth is the system declining to state what its own evidence cannot support - which is the design working, not a gap.
